

### Materials List

- 16 aluminum scales
- 4 anodized aluminum scales
- 2 Medium Jump Rings
- L16 anodized aluminum  
L = 1/4" (6.4 mm)
- 16ga SWG = 0.062" (1.6 mm)
- 2 earwires

**Prep:**  
Pre-open  
medium  
jump rings.

**Note:** For this project, it is important to notice which way the scales are laying as you add them to the jump ring to create the "spikes". The concave side of each scale should face each other so that the scales are "cupped" together instead of being stacked flush or flaring outward.

1. Position the scales together in pairs following the "correct" photo from above and place them on the open ring.

2. Repeat step 1 by adding the remaining 4 pairs. You can use a pair of colored scales in the center if desired.

3. Before closing your ring, add the earwire.

4. Repeat steps 1-3 for the other earring. You're done!
